#### 1. Dataset description:

The dataset used in this project is a CSV file about the air quality in northern Taiwan collected in 2015 [https://www.kaggle.com/datasets/nelsonchu/air-quality-in-northern-taiwan], which include air quality data and meteorological monitoring data for research and analysis, originally from Environmental Protection Administration, Executive Yuan, R.O.C. (Taiwan). There are 25 observation stations in total. Columns in this CSV file are the following:

- 1. Time The first column is the observation time of 2015
- 2. Station The second column is the station name, there are 25 observation stations, those stations are showing at the table  $\underline{1}$ .

Table 1: A table contain all stations in Taiwan.

		station		
Banqiao	Cailiao	Datong	Dayuan	Guanyin
Guting	Keelung	Longtan	Pingzhen	Sanchong
Shilin	Songshan	Tamsui	Taoyuan	Tucheng
Wanhua	Wanli	Xindian	Xinzhuang	Xizhi
Yangming	Yonghe	Zhongli	Zhongshan	Linkou

3. Items - From the third column to the last one

#### 4. item - unit - description

- SO<sub>2</sub> ppb Sulfur dioxide
- CO ppm Carbon monoxide
- O<sub>3</sub> ppb ozone
- PM<sub>10</sub> µg/m<sup>3</sup> Particulate matter
- PM<sub>2.5</sub> μg/m<sup>3</sup> Particulate matter
- NO<sub>x</sub> ppb Nitrogen oxides
- NO ppb Nitric oxide
- NO<sub>2</sub> ppb Nitrogen dioxide
- THC ppm Total Hydrocarbons
- NMHC ppm Non-Methane Hydrocarbon
- CH4 ppm Methane
- UVB UVI Ultraviolet index
- AMB\_TEMP Celsius Ambient air temperature
- RAINFALL mm
- RH % Relative humidity
- WIND\_SPEED m/sec The average of the last ten minutes per hour
- WIND\_DIREC degrees The average of the last ten minutes per hour
- WS\_HR m/sec The average of an hour
- WD\_HR degrees The average of an hour
- PH\_RAIN PH Acid rain
- RAIN\_COND μS/cm Conductivity of acid rain

# **Proposal:**

The purpose of this project is to predict  $O_3$  concentrations using measurements of concentration of other pollutants and available meteorological measurements. Ozone might be formed when heat and sunlight cause chemical reactions between oxides of nitrogen ( $NO_x$ ) and Volatile Organic Compounds (VOC), which are also known as Hydrocarbons. Therefore it could be hypothesized that using measurements of  $NO_x$  as an independent variable a model could be developed to predict  $O_3$  concentrations. Additionally, meteorological variables such as air temperature, relative humidity(RH) and ultraviolet index (UVB - UVI) could be included as independent variables to assess their influence on temporal variability of ozone. As an additional step wind-related variables such as mean wind velocity and direction will be included to study their effect on temporal variability of ozone.

After the air quality data has been processed the strongest  $O_3$  predictors will be determined using PCA. PCA could be used to identify the main axes of variance within the dataset and explore underlying correlations that exist in a set of variables. Variables that are highly correlated cluster together. Using PCA 2D figures per each pair of variables are not needed, instead all the variables could be visualized simultaneously. Differences on PC1 are more important than differences on PC2. After plotting PCA plots, a heatmap could also be plotted to check the results. As additional criteria to identify the strongest predictors a LSTM network (long short-term memory network) can be used since the data used is time dependent. The network should contain several LSTM layers and fully-connected layers. The output should contain the pollution concentration and will point out the weights assigned to each correlated criterion, the values of such weights should also indicate what the strongest predictors are. Once the strongest predictors have been identified, genetic programming will be used to develop the models to predict  $O_3$  concentrations.

# **Exploratory Data Analysis:**

subscript: H<sub>2</sub>O is a liquid

superscript: 2<sup>10</sup> is 1024.

unicode superscripts<sup>0123456789</sup>

#### unicode subscripts<sub>0123456789</sub>

A long paragraph of text. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

Putting each sentence on its own line has numerous benefits with regard to <u>editing</u> and <u>version</u> <u>control</u>.

Line break without starting a new paragraph by putting two spaces at end of line.

# **Document organization**

Document section headings:

# **Heading 1**

# **Heading 2**

**Heading 3** 

**Heading 4** 

**Heading 5** 

**Heading 6** 

#### Horizontal rule:

Heading 1's are recommended to be reserved for the title of the manuscript.

Heading 2's are recommended for broad sections such as Abstract, Methods, Conclusion, etc.

Heading 3's and Heading 4's are recommended for sub-sections.
